BMC TrueSight App Visibility Management: Administrator
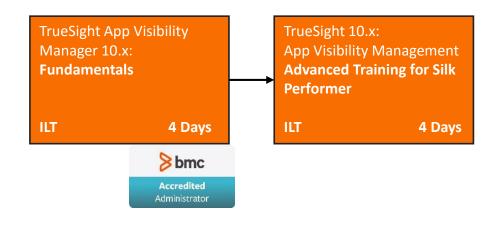

About the Product:

TrueSight App Visibility Manager ensures application performance in your multi-source IT environment. It helps you gain the insight into performance with application context views of all the tiers of the application delivery chain and quickly drill down to view events, device performance, services health, and launch probable cause analysis or log analysis.

Administrator Responsibilities:

- Setting up applications for monitoring
- Manually setting up active end-user monitoring
- Viewing event thresholds (SLAs) of applications
- Configuring event thresholds (SLAs) for automatically discovered applications
- Configuring application discovery
- Configuring an application to notify an application status change
- Editing application thresholds and configuration details
- Viewing managed applications
- Viewing the configuration details of an application
- Setting up and managing the App Visibility components and databases

Recommended for: Administrators, Developers, Operators
Applicable Versions: 10.0-10.7
